

u225x.com domain and Cloudflare setup

BIZ-001 / REV A / 2026.09.01

Connect the owned domain to the selected host using the host’s current DNS requirements. Keep ownership, DNS and website hosting distinct.

STATUS	Proven
CLASSIFICATION	BIZ
MATERIAL	WEB / CREATIVE
DISPOSITION	PUBLIC / PROVEN
CATEGORY	Website / Business / Creative
RECORD TYPE	reference

GOAL

Run the first test described in this guide and record the result for u225x.com domain and cloudflare setup.

SOURCE STATE

New reference guidance; not a recovered test result

METHOD / STEPS

1. Record registrar, DNS provider and hosting project. Export existing DNS records before editing.
2. Copy the host-provided A, AAAA or CNAME records exactly. If changing nameservers, preserve mail-related MX and TXT records.
3. Choose a canonical address, such as <https://u225x.com>, and make the other hostname redirect to it. Configure TLS using the host’s supported Cloudflare setup; use Full (strict) only with a valid origin certificate.
4. Test apex, www, HTTPS, existing email and a deep page in a fresh browser session.

THINGS TO WATCH FOR

A domain transfer is not required simply to host a website. Blindly proxying a record can break a host’s verification. DNS propagation and cached redirects can obscure the current result.

FIRST TEST / WHAT TO RECORD

Save the working DNS values privately and record when HTTPS and both hostnames were verified.

RESULT / WHERE THIS STANDS

Save the working DNS values privately and record when HTTPS and both hostnames were verified.

TROUBLESHOOTING

- A domain transfer is not required simply to host a website. Blindly proxying a record can break a host's verification. DNS propagation and cached redirects can obscure the current result.

SPECIFICATION
