

PayPal payment option

BIZ-006 / REV A / 2026.09.01

Add PayPal as a separate payment route while keeping order amounts and fulfillment rules under server control.

STATUS	Recovered/Partial
CLASSIFICATION	BIZ
MATERIAL	WEB / CREATIVE
DISPOSITION	PUBLIC / RECOVERED/PARTIAL
CATEGORY	Website / Business / Creative
RECORD TYPE	reference

GOAL

Run the first test described in this guide and record the result for paypal payment option.

SOURCE STATE

New reference guidance; not a recovered test result

METHOD / STEPS

1. Create merchant and buyer sandbox accounts and use the current official Checkout integration for the chosen stack.
2. Create orders on the server using catalog prices and currency. Store the secret securely; expose only the intended client-side identifier.
3. After approval, capture on the server and verify the capture status, amount and currency before fulfillment.
4. Test approval, cancellation, failed capture and repeat requests. Save provider transaction IDs against the internal order.

THINGS TO WATCH FOR

Client approval alone does not prove money was captured. Do not mix sandbox and live credentials. Handle duplicate captures and webhook notifications without shipping twice.

FIRST TEST / WHAT TO RECORD

One verified capture maps to one internal order with a clear refund and reconciliation trail.

RESULT / WHERE THIS STANDS

One verified capture maps to one internal order with a clear refund and reconciliation trail.

TROUBLESHOOTING

- Client approval alone does not prove money was captured. Do not mix sandbox and live credentials. Handle duplicate captures and webhook notifications without shipping twice.
