TECHNICAL NOTES

Conversation-specific knowledge extracted from the copy and rename drawings discussion.

CONVERSATION / QUESTION AND CONTEXT

I need a code that will copy C:\test\test.slddrw 65 times and name each new file per each line in C:\test\test.txt

CONVERSATION / EXTRACTED GUIDANCE

1. Takes `C:\test\test.slddrw`
2. Reads each line from `C:\test\test.txt`
3. Copies the drawing once per line
4. Names each new `.slddrw` using the text from that line
5. Stops automatically when the text file ends (65 lines or any number)
6. --
7. Existing files with the same name will cause an error
8. If needed, I can add auto-overwrite or auto-suffix logic
