

The Elevator / Food Poster Workspace

ERR-ELEVATOR-001 / REV B / 2026.10.10

This project turned a reusable food-poster layout into a private browser workspace. It combined dish photos, the original restaurant logo, editable titles and dates, saved posts, and PNG downloads. A second format held six daily specials for a Monday-Saturday week. The workspace was built and published in September 2026, then retired at the owner's request. Its project story stays here; the old workspace now leads to this record and its editing endpoints are closed.

STATUS	ABANDONED
CLASSIFICATION	ERR
MATERIAL	WEBSITE / FOOD POSTERS / WEEKLY SPECIALS
DISPOSITION	DEPRECATED / MOVED TO GRAVEYARD
CATEGORY	Graveyard / Web Projects
RECORD TYPE	build-post

TECHNICAL NOTES

A private website for making The Elevator Bar & Grill's food-special posters and Monday-Saturday menus. The online workspace retired to the Graveyard on October 10, 2026.

GOAL

Make repeatable restaurant-special posters from real dish photos, editable details, and a consistent set of artwork.

BUILD STORY

The useful part of this experiment was separating reusable poster design from the information that changes for each special.

The daily layout combined a food photograph with two title lines, an optional description or price, and a date. The original restaurant logo stayed separate from the photo so it could remain unchanged when the dish or presentation changed.

The weekly layout used six text slots, one for each day from Monday through Saturday. Choosing the week set the date range, and the browser assembled a downloadable PNG from the reusable background and lettering.

For daily posts, the workspace kept the original dish image alongside a prepared scene. A comparison view and approval step came before export. The code also supported optional connected photo preparation, but

that feature depended on its separate service connection.

The project included private sign-in and saved-post storage. That made it possible to return to an existing special and change its text or date while retaining the selected image. This record describes the implemented workflow; it does not publish the private post library or establish how many posters were used in practice.

On October 10, 2026, the owner chose to retire the website side of the food-poster project. The old address now points here, and its API returns a retirement notice. Existing stored project data was left in place. The original implementation remains in the repository history as a record of the experiment.

RESULT / WHERE THIS STANDS

The daily and weekly poster workspace reached a published implementation. It is now retired. The online editor, sign-in, uploads, photo preparation, saved-post actions, and downloads through its API are unavailable; this public record preserves what was built.

SPECIFICATION

ORIGINAL WORKSPACE	Private browser-based poster editor
DAILY FORMAT	1080 × 1350 PNG
WEEKLY FORMAT	1145 × 1374 PNG / Monday through Saturday
REUSABLE ELEMENTS	Original logo, saved backgrounds, lettering, and date badge
PHOTO WORKFLOW	Original and prepared image comparison, followed by approval
RETIREMENT	October 10, 2026 / owner-requested move to the Graveyard
CURRENT AVAILABILITY	Project record only / online editing closed

DEVELOPMENT HISTORY

2026.09.19 / A

Published the private Elevator poster workspace with reusable artwork and protected photo storage.

2026.10.10 / GRAVEYARD

Retired the online workspace at the owner's request. Preserved this project record and closed the editor's API without deleting saved project data.
